CERTIFICATE OF PRIORITY CLAIM AND SCIENTIFIC DISCOVERY

DATE OF REGISTRATION / ISSUANCE: October 14, 2026
ORIGINATING REPOSITORY: Zenodo / Seruuma Master Manuscript Architecture
AUTHOR / PRINCIPAL INVESTIGATOR: Seruuma Kenneth

I. DECLARATION OF PRIORITY AND SOVEREIGN DISCOVERY

This instrument serves as an official, immutable record of priority and intellectual precedence for the newly established principles, terminologies, and framework updates concerning the "Composition of Tension" within the Seruuma theoretical architecture.

This document formally establishes and pre-emptively shields the discoveries listed herein against uncredited misappropriation, unauthorized derivative reframing, and intentional re-branding by external parties, academic institutions, or independent research groups.

II. PROTECTED CONCEPTS, DEFINITIONS, AND TERMINOLOGIES

1. "Seruuma's Law of Tension"
Definition: The fundamental physical principle establishing that tension universally exists in two orthogonal components—a linear component and a circular component—which are strictly related in both magnitude and direction
Pre-emptive Protection: Ownership of the mechanical formulation that altering the direction of linear tension at a point automatically induces a corresponding directional change in the orthogonal circular component

2. "Recurrence and Attenuation Mechanics"
Definition: The principle stating that at every instance of time, linear tension at a point corresponds with a recurrence of linear and circular components in succession (each leading to the other) along the plane perpendicular to the initial linear tension, spreading in attenuation away from the point

3. "Unified Tension Field Classification"
Definition: The foundational reclassification declaring that all known fields—including magnetic, electric, mechanical, and gravitational fields—are fundamentally "tension fields"
Specificity Rule: The principle that a tension field dictates the path of influence along which specific entities experience tension (e.g., magnetic and electric tensions influencing charge; mechanical and gravitational tensions influencing matter)

4. "Domain-Specific Tension Manifestations"
Wave Mechanics: The explicit discovery that physical ripples are the direct consequence of tension recurrence
Electromagnetism: The reinterpretation where potential difference across a wire constitutes linear tension, and the surrounding circular electric field represents its corresponding circular component

Orbital Mechanics & Astrophysics: The mechanical definition that orbital objects experience gravitational tension characterized by a linear component along the orbital radius coupled with a circular component, which directly drives the “spinning of objects in orbit”

III. LEGAL AND ACADEMIC SHIELDING CLAUSE

Any subsequent publication, theoretical model, or institutional framework adopting, re-labeling, or integrating these concepts—specifically the dual orthogonal components of tension, tension-field reclassifications of fundamental forces, or the mechanical genesis of orbital spin via circular tension components—must explicitly cite the Seruuma Framework and its Zenodo registry as the original source. Failure to do so constitutes an unauthorized misappropriation of proprietary theoretical physics.

“AUTHENTICATED AND RECORDED FOR PRIORITY PRESERVATION.”
